Climate Analytics Platform Functional Series

> **Status: in development.** This series is being written section by section; the sections below are the planned structure.

A domain-level series on what the platform measures, how it analyses it, how the results compare with authoritative climate references, and what its trends imply for the Paris Agreement targets. It complements the Technical Series, which covers how the platform is built.

#	Section	What it covers
1	Data Sources	Emissions inventories, concentrations and temperature; coverage, quality and harmonization
2	Methodology	Trend analysis, forecasting, scenarios and temperature mapping, limitations and uncertainty
3	Benchmarks	The platform's outputs against IPCC, UNEP, Global Carbon Budget and other references
4	Paris Agreement	The agreement, its targets expressed as numbers, and country NDCs
5	Findings	Where emissions stand, how the scenarios compare with Paris-aligned pathways, and caveats
